

FOR IMMEDIATE RELEASE

Ground Breaking Research Presented at Prestigious IEEE Global SIP Conference on Network Wave

Roberto Martin-del-Campo recently presented eye-opening research at the IEEE Global SIP Conference confirming the existence of a unique Central Pattern Generator in the spine associated with the Network Wave. This holds huge importance for current and future spinal research.

WASHINGTON, D.C. – (May 11, 2016) – The Association for Reorganizational Healing Practice (ARHP) is excited to announce a recent breakthrough in research findings relating to spinal function and nervous system organization. This research was presented at the annual Institute of Electrical and Electronics Engineers (IEEE) Global Signal and Information Processing (SIP) Conference, and conducted by Roberto Martin-del-Campo and Edmond A. Jonckheere at the University of Southern California Department of Electrical Engineering and Mathematics.

The research confirmed the existence of a unique Central Pattern Generator in the spine associated with the Network Wave. The Network Wave, first demonstrated by Dr. Donny Epstein over 25 years ago, has been described as a spinal healing wave that helps to promote wellness, self-awareness, and healthier lifestyle choices. The Network Wave response is a visible physiologic process or undulatory motion of the spine, and surrounding structures, which has been demonstrated to be linked to specific frequency entrained spinal oscillation (rocking vertebrae), arising from precise force or touch applications to the spine. It is an integral part of care provided by Network Spinal Analysis practitioners, who are members of the Association for Reorganizational Healing Practice.

“This presentation further evidences the Network Wave and the far reaching benefits of Network care,” commented Dr. Donny Epstein, President of the Association for Reorganizational Healing Practice. “Identifying this unique Central Pattern Generator is invaluable in spinal function and behavior. This is especially promising as it relates to improving naturally inspired healing, making healthier choices and living with greater resourcefulness.”

Roberto Martin-del-Campo, presenter of the paper remarked, “These unique findings are furthering our understanding of the spine and nervous system. The potential implications for

spinal research are profound as we are able to measure coherence in the nervous system more precisely. We illustrated the reproducibility of the Network Wave indicating that the spinal wave is a coherent movement elicited by a Central Pattern Generator, opening the road for the potential of this coherence analysis to become part of the neurological suite.”

The ARHP is an international professional organization, advancing the practice of Reorganizational Healing. Practices currently supported by the ARHP include Network Spinal Analysis Care and Somato Respiratory Integration Wellness Education. The ARHP currently has members across North and South America, Australia, and Europe.

About The Association for Reorganizational Healing Practice

The Association for Reorganizational Healing Practice (ARHP) is a not-for-profit professional organization based in Washington, D.C., advancing the applications and practice of Reorganizational Healing. By developing new strategies for living and healing, Reorganizational Healing focuses on assisting individuals to more effectively navigate life. For more information on the ARHP, visit the site at www.reorganizational.org.
